## **Foundation certification in Higher Education**

Module : DOC 333 – Introduction to Programming

Module Leader : Mr. Sudharshan Welihinda

Type of the Assignment : Individual Coursework

Submission Date : 8<sup>th</sup> December 2023

Full Name : Amer Abdul Azeez Shiraas

Student ID : 20231461

Course : Foundation Course September 2023

Group : H

# XYZ Company Project Management System

## Introduction:

The XYZ Company Project Management System helps to organize and keep tabs on projects, assign tasks to available workers, and give important information for making good decisions. It's easy to use, with a menu that has different choices to make managing projects easier.

## Menu Options:

### 1. Add a New Project:

- Users can input details such as project code, client's name, start and end dates, required number of workers, and project status.
- The system checks if there are sufficient available workers for the project.
- Users are encouraged to confirm the addition of the project, and if confirmed, the project is saved, and the required workers are subtracted from the available pool.

### 2. Remove Completed Project:

- Users can input the project code to remove a completed project.
- The system verifies if the project code is valid and if the project is marked as completed.
- Users are encouraged to confirm the deletion of the project, and if confirmed, the project is removed from the system.

### 3. Add New Workers:

- Users can input the number of workers to be added to the available pool.
- Users are encouraged to confirm the addition of workers, and if confirmed, the available workers count is updated.

#### 4. Update Ongoing Projects:

- Users can input the project code to update details of an ongoing project.
- The system verifies the project code, releases the previously allocated workers, and prompts users to input updated project details.
- The system checks if there are sufficient available workers for the updated project.
- If there are sufficient available workers user updates the project

#### 5. Project Statistics:

- Users can view statistics such as the number of ongoing, completed, and on-hold projects, along with the available workers count.
- Users have the option to add a new project or continue with other tasks.

#### 6. Exit:

- Users can exit the program, ending the project management system.

## Test Cases

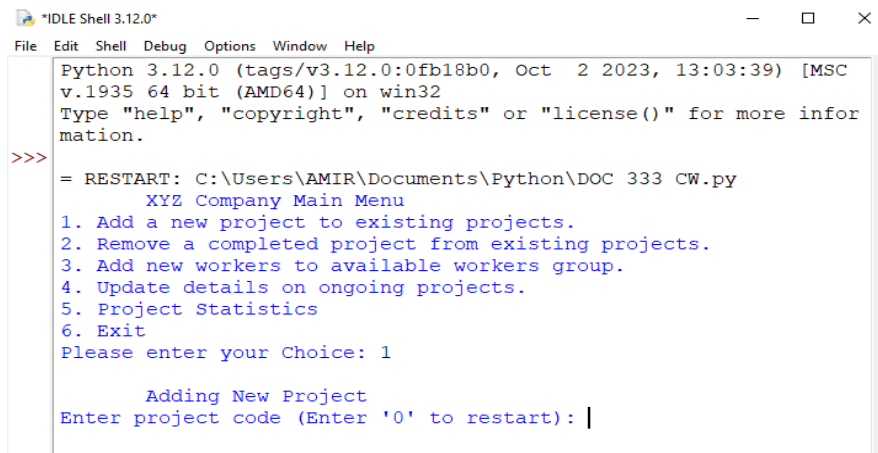

### Test Case 1: Menu

#### 1.1. Table test case for the menu page.

NO.	Input	Expected Outcomes	Actual Outcomes	Result
1.	1	Accesses add project page.	Accesses add project page.	Pass
2.	2	Accesses remove project page	Accesses remove project page	Pass
3.	3	Accesses add new workers page	Accesses add new workers page	Pass
4.	4	Accesses update details page	Accesses update details page	Pass
5.	5	Accesses project statistics page	Accesses project statistics page	Pass
6.	6	Ends program	Ends program	Pass
7.	88	Not a valid choice	Not a valid choice	Pass
